## New Target Policy

USPSA Cardboard Target Specifications:

This policy covers Metric, Classic, Half-Metric and Half-Classic cardboard targets beginning with manufacture in 2017.

*Note: Half-sized targets are authorized beginning January 1, 2017 but must conform to the measurements provided. Half-sized targets are permitted at level one USPSA matches only.*

All dimensions are in centimeters. For convenience, a drawing converted to English measurements is included in the target specification package, but official measurements are in centimeters.

Material: 200 lb. test cardboard, B or C vertical flutes, tan front, white back. All corners are intersections of straight lines (no rounded corners) .

Border Area:

0.5 cm (.20 inches) on both full and half-size targets.

Scoring lines: Perforated outer line (Non-scoring border) perforated through to back.

**Perforated scoring lines may be perforated through to back.

The words "Official USPSA/IPSC Target" and the manufacturer's license number appear in the lower D zone in embossed or perforated letters approximately 3/4 inch high. Perforations may extend through to back.

Target samples must be sent to the Director of NROI any time a new target die is installed, or changes are made in the manufacturing process. Three targets from the same lot will suffice.
