

Meet Sarah Kalika

Sarah Kalika is a Senior Project Geologist for Cornerstone Earth Group, currently working part time to care for her 8-month old twin girls. She started collecting rocks as a toddler and was fascinated by maps as a child. She chose to major in geology at UC Santa Barbara because of the opportunities to travel and go camping throughout California.

Sarah joined AEG on the recommendation of a colleague after obtaining her PG license. She has since served as the Vice Chair of the San Francisco Section and is currently the Section Chair. She also serves on the Governance Committee and the planning committee for AEG's bid to host the 2018 IAEG/AEG joint meeting in San Francisco.

Sarah has worked as an environmental geologist for 12 years, specializing in due diligence assessments for property transfers and mitigation of naturally occurring asbestos. In addition to her PG license, she has earned several certifications in California including Certified Asbestos Consultant (CAC), lead paint inspector/assessor and supervisor, and storm water qualified SWPPP developer/practitioner (QSD/QSP).
