

Maxi-Lift Inc. introduces the new

HD-STAX[®]
STACKABLE HEAVY DUTY BUCKETS

Dallas, Texas—February 21, 2015 — Today at the Grain Elevator and Processing Society EXPO, Maxi-Lift Inc. launched the company's 5th new bucket design, the HD-STAX, designed to improve wear life, performance, and shipping economy while reducing down-time and storage space.

“HD-STAX is the next evolution for Maxi-Lift, a bucket design built for durability and performance that is competitive to ship around the globe,” said Byron Smith, Vice President of International Sales at Maxi-Lift Inc. “The HD-STAX has it all; the tough design and increased capacity of our HD-Max, plus a longer life wear lip. It is stackable which reduces storage space as well as freight costs. It’s the perfect bucket!”

Durability Enhancements

Maxi-Lift's elevator bucket designs are known industry wide as the template for long wearing, durable elevator buckets. The new HD-STAX takes the best features of those designs and carries them to a new level of performance. Broad corners coupled with a wider and thicker front lip beef up the HD-STAX to give users long life and predictable reliability.

Stacked Design

HD-STAX utilizes a tapered design that allows for the deep stacking of the buckets for the purpose of reducing storage space and improve shipping economies. “Our International partners will see tremendous cost savings and benefit from the new bucket. We can fit so many more into much less container space saving them thousands of dollars on ocean shipping charges,” Offered Bo Fisher, Vice President of Sales/ North America.

HD-STAX is currently available in all six standard 6” inch projection sizes, with other sizes coming soon.

Maxi-Lift Inc. and HD-STAX are registered trademarks of Maxi-Lift Inc.
