

we-do-IT's LatLonGO® Mobile GIS Solution Achieves Certified SAP ERP Integration

MELBOURNE, Australia - we-do-IT's LatLonGO® Mobile GIS solution has achieved certified integration with the SAP® ERP application. Available on the iTunes App Store this spatial solution serves as a front end to functions within SAP ERP for plant maintenance and other activities. The LatLonGO® - Flexible Mobile IS Version 2.3 client accesses SAP® software through SAP NetWeaver® Gateway technology to exchange critical data with SAP ERP 6.0.

“Receiving SAP certification for our LatLonGO® interface is a further testament to our integration expertise, which started back in 1996 with the SAP-certified GIS interface at United Energy in Australia,” explained Dr Walter Hesse, CEO of we-do-IT. *“The LatLonGO® solution has been designed to address the challenges faced by mobile GIS users today. It manages the distribution of GIS information to touch mobile devices including iPad, Android and Windows 8 tablets. LatLonGO® compresses, encrypts and distributes data, giving users a seamless online and offline experience.”*

LatLonGO® supports any geographic information system (GIS) format and can process data from in-house or external (cloud) servers. It provides an up-to-date copy of corporate data and handles Smallworld, ESRI and spatialNET natively (WYSIWYG) and any other GIS format via OpenGeo or FME. LatLonGO® is ideal for mobile workers who require access to their corporate GIS data any time, even in remote or security sensitive locations where no web access is allowed.

The LatLonGO® mobility solution integrates with virtually any enterprise information system. The specific integration with the plant maintenance component in SAP ERP enables users to intuitively access *work orders, technical object hierarchy and notifications and operations* through a natural map user interface, thereby helping to greatly enhance productivity.

About we-do-IT

we-do-IT offers full life-cycle support to clients in telecommunication, electricity, gas, and water utility industries. We specialise in FTTx Physical Network Inventory (PNI) development, training and support using Synchronoss and GE Smallworld GIS technology. We have consultants in nine locations across Australia, New Zealand, North America, India and Europe. We listen carefully and work smart to understand our clients' business needs and deliver cost effective solutions. Over the last 17 years, we have worked on every GIS Business System Integration aspect imaginable and have accumulated a vast specialised domain knowledge base in the Telco and Utilities industry. We source best-of-breed technology and like-minded International partners to fulfil our customer's needs.
