

## **Integrative Medicine with Dr. Tenpenny: Vaccines, the BX protocol, and Corporate America**

ICIM is excited to announce that Dr. Sherri J. Tenpenny will be speaking this fall in her home state of Ohio at a conference called, “Innovation! Meeting Today’s Medical Challenges.”

Dr. Sherri Tenpenny is respected as one of the country's most knowledgeable and outspoken physicians regarding the negative impact vaccines can have on health, and she will be addressing this issue in one of her three lectures this October called “Vaccine Developers: Heros or Villains?”.

A second scientific presentation will focus on the BX protocol by the Delta Institute. Considered innovators in microbial research, the Delta Institute has persevered in their quest to provide remedial outcomes in cancer related pathologies, employing revolutionary research to discover, manufacture, and distribute treatment protocols which have the potential to reverse the so called "irreversible".

Finally, Dr. Tenpenny will speak about “The Future of Integrative Medicine in Corporate America” where she will describe how she is setting up a partnership with a corporation to provide integrative medicine care without insurance. Her company, Parker Hannifin, is reaching out to integrative medical doctors for their participation.

Come to ICIM’s conference on October 11-13, 2013, to learn about the future of integrative care for cancer and other “impossible” diseases, network with integrative physicians, and enjoy a rooftop anniversary celebration. To celebrate ICIM’s 30<sup>th</sup> anniversary, we will travel back to Columbus, the city in which we were founded, for our fall meeting.
