

## **Introducing 3WON!**

We are proud to introduce 3WON, LLC., a Credentials Verification Organization and technology company that helps medical professionals manage their credentialing and health plan enrollment. Founder and President Tom Bartlett started this company in 2010 as to make sure that physicians' information was always up to date and accurate, because he understood the impact of accurate data on a practice's finances, reimbursement and patient satisfaction.

3WON is now coming to New Jersey to help physicians and hospitals verify, update and distribute their information to reduce cost, relieve administrative redundancy and improve provider directory accuracy. Studies confirm that the average medical professional fills out 18 applications per year to comply with provider data needs for credentialing, enrollment and regulatory requirements. 3WON has developed technology to streamline, automate and continuously update your provider data to increase its accuracy and reduce costs, as well as shrink the time it takes to enroll in health plans, for a flat yearly fee of \$499. By being a part of this system, physicians can stop worrying about paperwork and whether all their qualifications are up to date, freeing up more time to spend with patients.

3WON will automatically notify the practitioner, typically 60 to 90 days in advance of approaching expiration dates of licenses, certification maintenance issues, professional liability coverage renewals, and CME credits, and will also manage demographic data to help promote the practice, with continuous updates provided to the health plans and hospitals engaged with the physician. Keeping office hours, phone numbers, location adds and deletes, handicap accessibility and health plan network participation information updated increases patient satisfaction and enables better patient flow.
