

# New: The SPE Online Plastics Encyclopedia

SPE members can learn from the collective wisdom of plastics experts around the world—and add to the global plastics knowledge base—through the SPE Online Plastics Encyclopedia, the Society’s newest knowledge-sharing tool.

The SPE Online Plastics Encyclopedia provides definitions, links to recent patents, journal articles, books, and discussions on hundreds of subjects categorized using SPE’s unique plastics taxonomy. This dynamic and growing resource is made up of the individual contributions—large and small—of SPE members.

This is where you come in.

We’re still in the process of building this interactive tool, and we need member input and expertise—your input and expertise—to become the topic-based technical resource for the plastics industry. Every one of our members is an expert in some aspect of plastics

technology or polymer science. No matter what your area or level or expertise, you have something valuable to add to the industry’s knowledge base.

As an SPE member, you can add to the Encyclopedia by contributing your own knowledge on a particular topic, wiki-style, or by participating in discussions on information contributed by other members. Your input can be as quick and simple as suggesting a new topic, posting a comment to correct an error, or providing further elucidation of a topic. Or you can become more involved by applying to become a contributor and helping develop the site.

Help us make the SPE Online Plastics

Encyclopedia the “go to” resource for SPE members and other plastics professionals. Check out the Encyclopedia today—and see what you can learn and contribute.

**How To Use This Benefit:** Visit the SPE website at [www.4spe.org](http://www.4spe.org). Click on the Online Plastics Encyclopedia link in the Technical Resources section of the homepage. Browse the Encyclopedia using keywords or the directory. Or share your own insights and expertise by following the directions to become an Encyclopedia contributor, or post a comment on any topic.
