ISO TC 217 - Cosmetics Announces the Publication of New International Standard

This new International Standard specifies an analytical procedure for the determination of trace levels of heavy metals in finished cosmetic products. Prepared by ISO TC 217, Working Group 3, in collaboration with the European Committee for Standardization (CEN) Technical Committee, CEN/TC 392, Cosmetics, ISO 21392 will also become a CEN standard. This is the 36th Standard under the direct responsibility of ISO TC 217 and the ninth Standard issued by the Analytical Chemistry Working Group.

All ISO standards may be purchased from the ANSI eStandards Store. For more information on the ISO activities, contact PCPC’s Jay Ansell or Joyce Lam.
