Frederick, Maryland (May 17, 2022) – The National Society of Professional Surveyors Foundation, Inc. (NSPS Foundation) announced the selection of 19 scholarship awardees from this year’s group of college student applicants enrolled in geospatial technology programs leading to degrees in Geomatics, Geodesy, Surveying, Survey Engineering, or Land Surveying Mapping Science.

The purpose of the NSPS Foundation is to promote educational, scientific, research, study, and charitable activities in the fields of surveying, mapping and land information sciences. The Foundation is looking to help students that are leaders at their college, in their community and maintain strong academic records.

The scholarships are awarded annually from funds created by various companies, professional organizations and individuals to help assist the financial needs of these future geospatial professionals. The NSPS Foundation’s and American Association for Geodetic Surveying’s Scholarship Committees select each year’s awardees based on their academic record, letters of recommendation, financial need and their introductory letter outlining their educational plans, future goals, significant activities and contributions to their school, community and the surveying profession.
